

LOGO LOCKUPS

8 WORDMARK CANDIDATES · SAME SYSTEM · 2026-05-02

RETICLE MOTIF + CONDENSED SANS WORDMARK
PRIMARY ON WHITE · INVERTED ON NAVY

System. Reticle (circle + crosshairs + flame-orange dot) + wordmark in heavy condensed sans, uppercase, with optional THE article in lighter weight. Same lockup geometry across all eight; only the wordmark text changes. The orange dot stays orange in both variants — it is the single accent the brand permits anywhere. Highlighted tiles (orange edge) are the strongest pick from each price tier.

HOW TO READ THIS

Each tile is the same lockup geometry — only the wordmark text varies. The reticle proportions (28px circle, 4px crosshair extension, central dot) are constant.

Names with a "THE" article (Scout Room, Pitch Line, Stand, Morning XI/11) gain editorial weight from the lighter prefix; the brand reads as a publication, not a product. **Names without an article** (Scout Room solo, Odds Primer, Scoutline) feel a notch closer to "tool" or "feature" — slightly weaker as a publication wordmark in this system.

What to look for. Which lockup feels inevitable on second viewing? Which one would you comfortably put on a printed match-day programme? Which one wears the inverted (white-on-navy) variant best — masthead, social cards, and merch all need that mode to work too.

Provisional reads. **The Scout Room** + **The Morning XI** have the strongest fit with the system as drawn. **The Stand** is the cleanest single-syllable option — strongest inverted-on-navy presence. **Scoutline** and **Odds Primer** read less like a publication and more like a feature; if either of those wins on positioning, worth re-testing the lockup with a different glyph (the reticle may not be the right system glyph for those names).
